

## MATTHEW GINGOLD 20 . 03 . 1975

### Biography

**Matthew Gingold** is an audiovisual designer and electronic artist with over 15 years professional experience. His practice spans theatre, dance, museum, and gallery contexts. He is particularly interested in the social and cultural meanings that technology create in and of themselves – the visceral, social and political phenomena of technologies – and how these can be harnessed in the creation of unique, live(d) experience.

His work has been widely presented nationally and internationally, including at Ars Electronica (Austria), Werkleitz (Germany), Medialab-Prado (Slovenia), Teatro Mayor (Columbia), MOCA Taipei (Taiwan), Expo Bicentenario (Mexico), Seoul Festival (Korea), Melaka Festival (Malaysia), Surrey Urban Screen (Canada), MONA/FOMA (TAS), Perth Institute of Contemporary Art (WA), Malthouse (VIC), Sydney Theatre Company (NSW), Carriageworks (NSW), Brown's Mart (NT), Melbourne Museum (VIC), and the National Portrait Gallery of Australia (ACT). Gingold has also completed several residencies, including 6 months at Ars Electronica's prestigious FutureLab (2012), project leading for Media-Lab Prados' Interactivos? '12 Ljubljana (2012), participating in a Yamaguchi Centre for Media Arts Inter-Lab (Japan, 2008), and was a core artist for Aphid's, *Atelier Eden* OzCo Arts Lab projects (2011-12).

In 2015 Gingold completed several major projects, including developing and exhibiting *Phase Orkestra* during a residency at Werkleitz, Halle (Saale) as part of the *Move On* New Media Art from Australia, Canada and Europe / EMARE program. And he toured *The Experiment* with Mark Ravenhill & David Chisholm to Sydney, Adelaide and Melbourne International Arts Festivals.

Other recent works include: *Filament Orkestra*, a light and sound installation investigating the interconnectedness and performance of social memory for What I See When I Look At Sound (PICA 2014); creating a real-time system for projection of video onto the bodies of dancers for Australian Dance Theatre's *Multiverse* (Space Theatre, Adelaide 2014); *Green Room* award winning (2015) video design for Sisters Grimm's *Culpurnia Descending*, an epic live cinematic, cross-genre, cross-dressed romp through the camp icons of the silver screen (STC & Malthouse 2014); working as a Research Fellow at the School of Interactive Art & Technology (Simon Fraser University) with Professors Thecla Schiphorst and Philippe Pasquire to create *Longing & Forgetting* an interactive architectural projection using mobile phone gestures, machine learning and pattern recognition to choreograph video avatars (Surrey Urban Screen Vancouver, 2013-14); *Conversations*, a permanent portrait installation for the Melbourne Museum's Bunjilaka Gallery documenting 50 participants from across Victoria's Koori communities (2012-2013); directing, composing and performing *ZeroZero* with Tony Yapp, Yumi Umiumare and Paula van Beek, a work exploring identity across cultures through contemporary and shamanistic dance practices (Melbourne International Arts Festival, 2014); *It's a Jungle in Here* with Isobel Knowles and Van Sowerwine, an interactive animation exploring social aggression and control, presented at the Melbourne International Arts Festival (2011) and winner of a Distinction in Interactive Art, Prix Ars Electronica (Linz, 2012).

Additionally, Gingold has worked as a technical director and consultant for exhibition installation, stage productions, community and public artworks – often acting in the capacity of a “technology dramaturge” – facilitating, scoping and advising on what technologies to use and how best to use them. He holds a BA (with Distinction) in Media Arts (RMIT) and has partially completed degrees in Law, Science, Humanities and Electronic Design and Interactive Media. He was the Director of Seventh Gallery from 2005-2008 and is a founding member of the audio-visual jam collective Outpost – part of the international Share network. He is an active, senior developer within the openFrameworks community – a project providing accessible c++ libraries for artists – and was responsible for developing ofxOpenNI, one of the most popular implementations of Kinect computer vision and skeleton tracking. Gingold is also the Director of Trace Media, a small business specializing in the development of Rich Media content delivery both online and offline. Clients include the Ontario Science Centre, Melbourne Museum, CSIRO, Sensis and ACMI, where he developed video-on-demand systems, operating on over 50 screens throughout ScreenWorlds, a permanent exhibition of Australian screen culture.
